

AIR FLOOR

2014/01/25

Inflatable air floor solution has become one of the most practical and popular solutions for outside activities, and a must have for RV owners (camping & caravanning).

Our company has its own R&D department, and we are proud that our air floor solutions are among the best in the world regarding quality of workmanship and the materials selected.

Comparing to similar products on the market, our inflatable air floor solution have an “upper hand” over competition:

- small and light when packed in the bag
- completely mobile
- pleasurable and non-slip surface
- easy to clean and maintain, superior UV protection
- multifunctional usage (as a water raft, artificial beach, nautical platform, etc.)

We produce air floor from PVC or Hypalon. For price sensitive customers, we can use PVC+PU (% of PU could be different, from 5% to 50%), which represents good price-performance compromise.

Recommendations:

On Hypalon (CSM) field, we work with Orca hypalon (CSM) double wall fabric manufacturer, as a demo samples supplier for their exhibitions on fairs.

About us:

Hovercraft d.o.o. is a manufacturing company with in-house RD department. It offers products and services on inflatable products field since 2003. Our motto is innovation, flexibility and cooperation with our clients on OEM basics.

Our production unit is based in Stahovica near Kamnik. We are foremost known in local, Slovenian, market, but lately, we are rapidly expanding our business in other EU countries.

Contact us!

As a young company we are seeking for dealers who possess great knowledge of caravanning market, and would be able to share our vision and passion for Hypalon (SCM) and PVC+PU inflatable products.
